Obituaries in this edition were: Wm. Lloyd Abarr, Myrtle Mae Bryant Akers, Marietta Josephine Heinisch Williams Brown, Violet Pauline Walkup Denton, Etta Arleen Barton Elswick, Quentin K. "Curly" Hayworth, Robert Henderson Saltzman, Jeffrey Alan Stout, Betty Jean Dowell Trimble and Larry Eugene White.

Ten Years Ago

(From the Mount Ayr Record-News, Thursday, December 3, 2015.)

On a national basis, the state of Iowa is not widely known as a hotbed of rock n' roll music, but most Iowans know rock music has a long history in the state. In fact, Iowa's rock history even extends all the way into Ringgold County as one Mount Ayr graduate has been inducted into the Iowa Rock n'Roll Hall of Fame not once but twice.

This year Carey Crowson, a 1972 graduate, was honored with inclusion in the Rock Hall of Fame for his individual accomplishments in the music industry over the past 40 years, and according to his Hall of Fame biography, "dedication to making music special for all Iowans and beyond."

Braby named Coach of the Year and three named to All-District Team in volleybally. Tori Braby named All-District Coach of the Year and named to All-District were Alyssa Johnson, Blair Glendenning and Kelcie Shields.

Obituaries in this edition were: Everett Lee Faris, Vernon "Sonny" King and Janice Jean Carlson Lindeman.

Iowa's busiest deer seasons are almost here

Continued from page 7

hemorrhagic disease impacts from 2024 and 2023. Hunters are encouraged to reach out to our wildlife staff and conservation officers to discuss what they are seeing in the field."

Weather-wise, the 10-day forecast calls for high temperatures from middle 30s to middle 20s, which means the snow is likely here for a while.

"The cooler temperature generally leads to better harvest, but the snow can be tricky. We know that snowfall on opening day leads to a 10 percent increase in harvest for the season. Snow does make it easier to see deer, track deer and to see deer signs, which are all the right conditions for hunters to be successful," Elliott said.

"However, if the snow is too deep, it can lead to fewer deer harvested and that's likely due to hunter behavior, not deer behavior," he said.

The gun seasons have been traditionally associated with groups of hunters walking through the timber, pushing deer towards other members of the hunting group, but results of the 2024 deer hunter survey found that gun season hunters are divided evenly in how they pursue the deer.

About half participate in traditional deer drives, while the other half prefer to hunt from stationary position. The deer hunter survey found that overall, 80 percent of respondents indicated they are satisfied with the overall deer hunting experience, citing the social aspect of the hunting groups and the opportunity to put deer meat in the freezer as two reasons they hunt.

Main beam antler measurement

Hunters are required to include the main beam antler measurement when reporting their deer harvest.

"Main beam antler measurement allows us to estimate the percentage of yearling bucks as part of the harvest. There was a strong variation across Iowa where counties with lower deer densities and less deer habitat saw a higher rate of yearling bucks as a percentage of the buck harvest," Elliott said.

Statewide, yearling bucks made up roughly 40 percent of the total buck harvest.
