May Is Hepatitis Awareness Month

Hepatitis is an inflammation of the liver that can cause health problems, such as liver cancer and liver failure.  
Learn the ABCs of this serious virus.

Hepatitis A

- Spread through contaminated food and drink.
- It's very contagious and you can spread the virus even if you don't have symptoms.

Hepatitis B

- Spread through contact with an infected person's blood or other bodily fluids.
- There's no cure for hepatitis B, but treatment can delay or reduce the risk of developing liver cancer.

Hepatitis C

- There isn't a vaccine to prevent hepatitis C, but treatment is available.
- Most people with hepatitis C can be cured with just 8–12 weeks of treatment.

Help Protect Your Liver From Hepatitis

Ask your healthcare provider about hepatitis vaccines and testing.
